Jonathan Reid
Rachael Miles

Co-supervisor

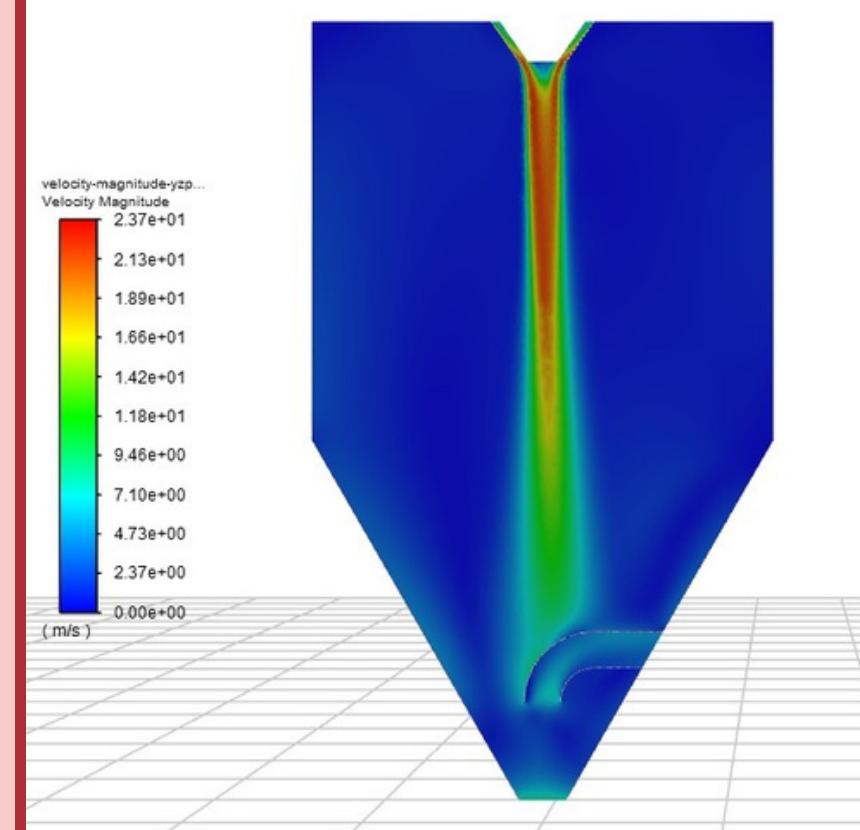

Andrew Bayly

Motivation

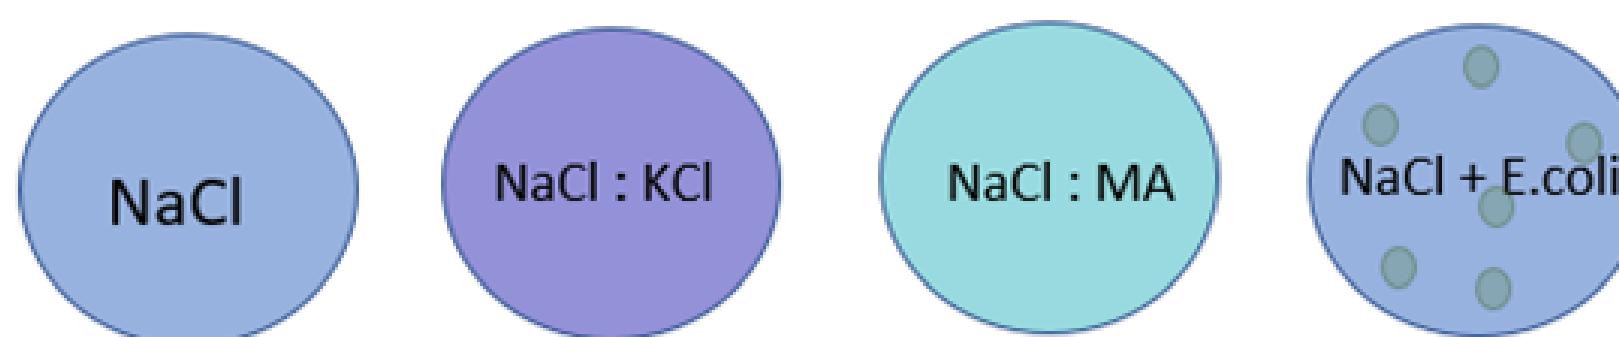

TBS - CFD modelling of Spray Dryers

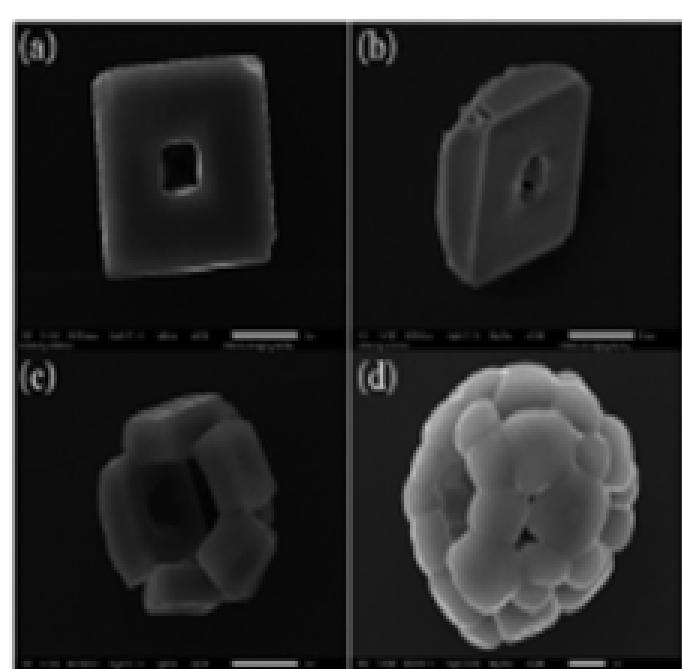

Velocity magnitude cross section (in the yz-plane) of the airflow in a Kieviet spray dryer.

Modelled in Ansys Fluent using boundary conditions from L.Huang, K. Kumar and A. Mujumdar, *Drying Technol.*, 2003, **21**, 957-978

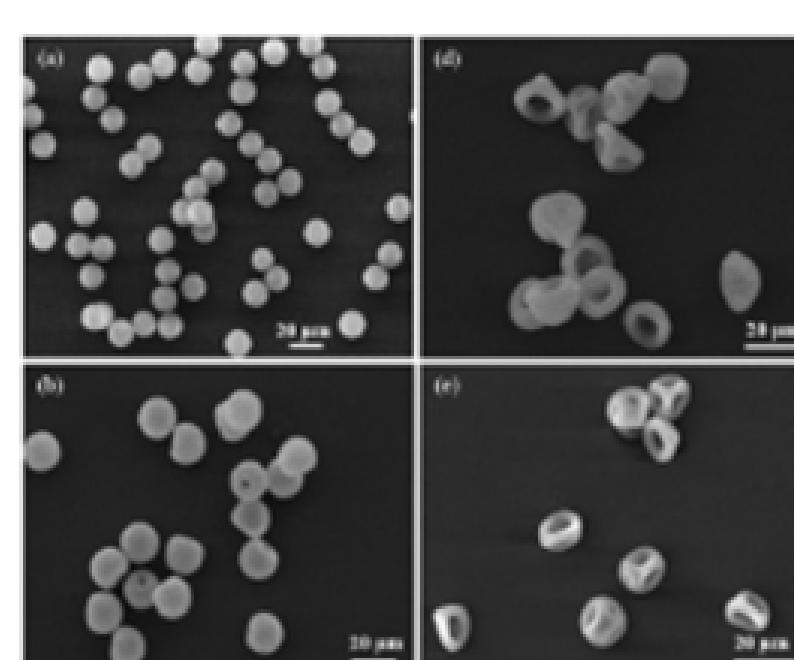

Background

Efflorescence relative humidity and deliquesce relative humidity are well defined for most systems.

Scanning Electron Microscope (SEM) images of particles formed in a falling droplet column (FDC). (a and b) 40% RH, (c) 25% RH, and (d) 0% RH.¹

SEM images of dried silica nanoparticles. (a) 64% RH, (b) 21% RH, (c) 8% RH, (d) 5% RH,² (e) 2% RH, and (f) 0% RH.²

Methodology

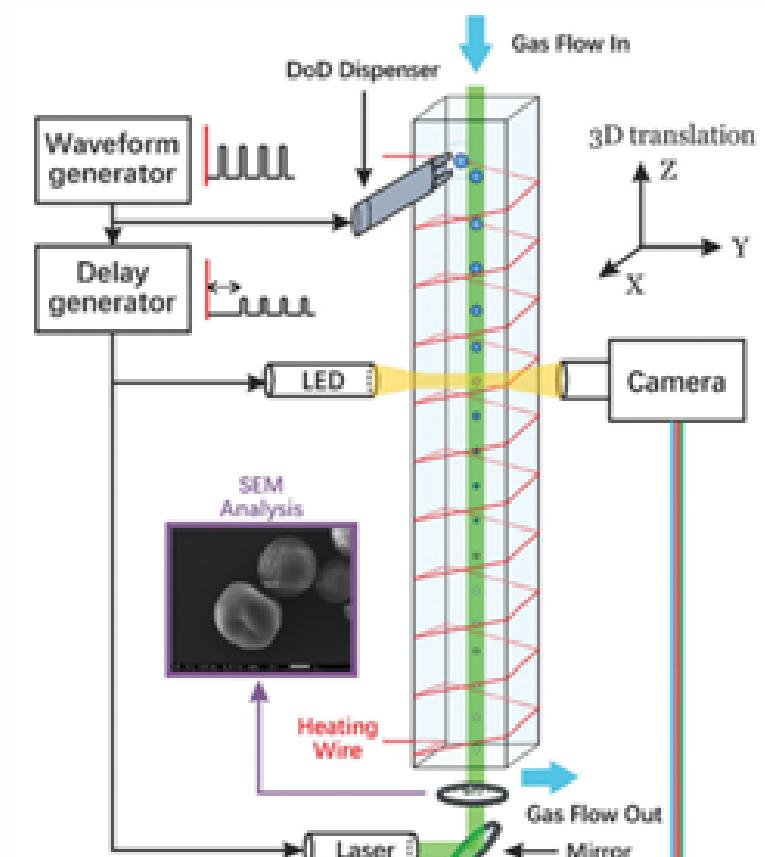

Fig 1. Schematic of a Falling droplet column.²

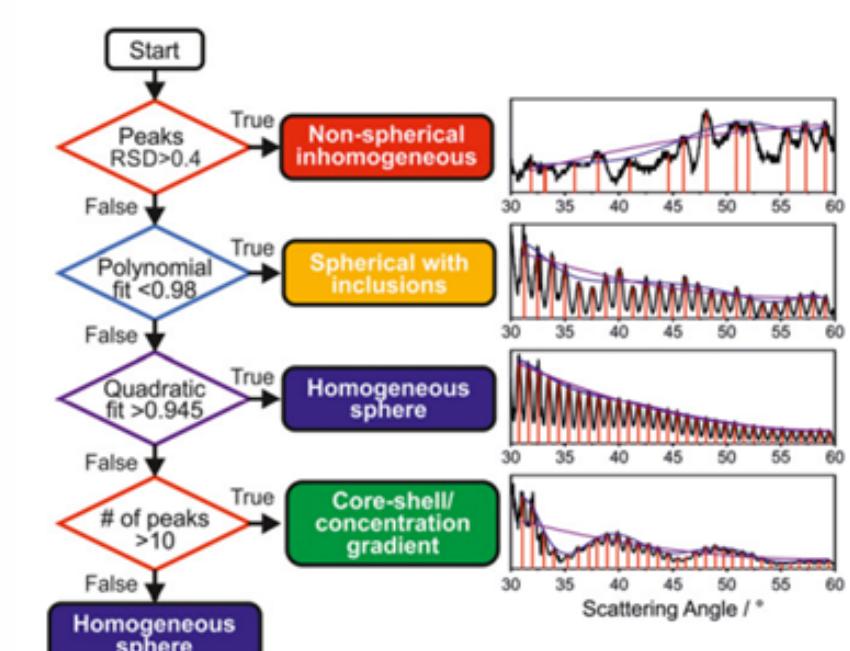

Fig 2. Flow chart to differentiate particle type based on the phase function.³
