

Researching Solar Storms with Citizen Scientists

Engaging with Four Thousand Volunteer Research Assistants

C. Scott, S. Jones & L. Barnard

Introduction

Solar Storms, or Coronal Mass Ejections

Impacts of Solar Storms

The twin STEREO spacecraft

A lot of data!

Each spacecraft:

- One image every 40 minutes
- 36 images per day
- 13,140 images per year

Altogether, since launch:

- 184,000 images to look through and Identify Solar Storms

Complex features of Solar Storms
difficult to identify automatically

Key Points:

- Solar Stormwatch has produced a unique CME catalogue, using STEREO/HI images
- The CMEs are tracked over multiple position angles and out to large elongations
- The full data set is publicly available online

The Solar Stormwatch CME catalogue: Results from the first space weather citizen science project

Edit

What do you see as a “complex” solar storm?

Thank you very much for all your help with our solar storm research over the past year – we’ve made some good progress, thanks to you!

Some of you might have seen our project ‘Protect our Planet from Solar Storms’, which we launched back in May with the Science Museum. Here citizen scientists compared images of two solar storms, and decided which was the most complex or complicated solar storm.

Re: Migraines and Coronal Mass Ejections
« Reply #3 on: April 07, 2010, 11:16:25 pm »

I've been using galaxyzoo for a while now, just found solar stormwatch. Having a nose around and come across this forum. I have suffered migraines and disturbed sleep patterns all my life and find it interesting you can match them up with solar flare activity. I would like to see if mine do too. Where would I find details of flare activity? It would be great to see if my occasional "sleep-walking" activities matched too! Thanks...

If any of you are interested in pursuing this further, I suggest you make a note of days when you suffer from migraines and have strange dreams for a month, and then compare that to the solar weather that occurred. Try to *avoid* looking at any real time solar forecasts while you're recording data to reduce the chances of biasing the results in any way.

I'd be happy to help analyzing trends, but you have to have some numbers to work with first. ☺

Thanks for that. Will follow suggestion and get back at a later date. Best wishes, ciderboyafc.

ciderboyafc,

If you really want to give it a fair shake, as was suggested by Qualiss, and in the spirit of this citizen-scientist program, you should post your results online here.

I would not think that there is any need to 'prove' anything here, it's been studied by the correct specialists for many decades. One good summary paper is here:

[Geomagnetic Fields, their Fluctuations and Health Effects](#)

regards,

T.Roc
