Appendix

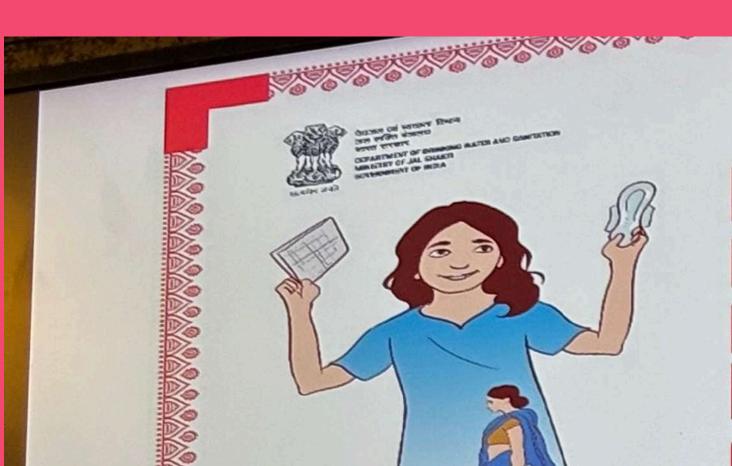

## Ashifting Landscape

#### Universal Health Coverage by 2030

Launching of Programmes under National Health Mission like the RKSK (Rashtriya Kishore Swasthiya Karyakram) Adolescent Friendly health Services for health promotion activities.

### Government prioritising preventive healthcare

As it deems 'preventive and promotive health' as the most cost-effective and affordable pathway to UHC.

## Fragmented System System

#### A mix of Public & Private

Public sector

Ministry of Health & Family Welfare

Private sector

For Profit-Private clinics and Diagnostic labs

#### Inequalities in access to SRH

Access to health information and services affected by factors like socio-economic status, geographic location, education level.

## Fragmented System System

क व लसीकरण केंद्र

CHILD SPECIALIST

CHILD HEALTH CLINIC

AND IMMUNIZATION CENTRE

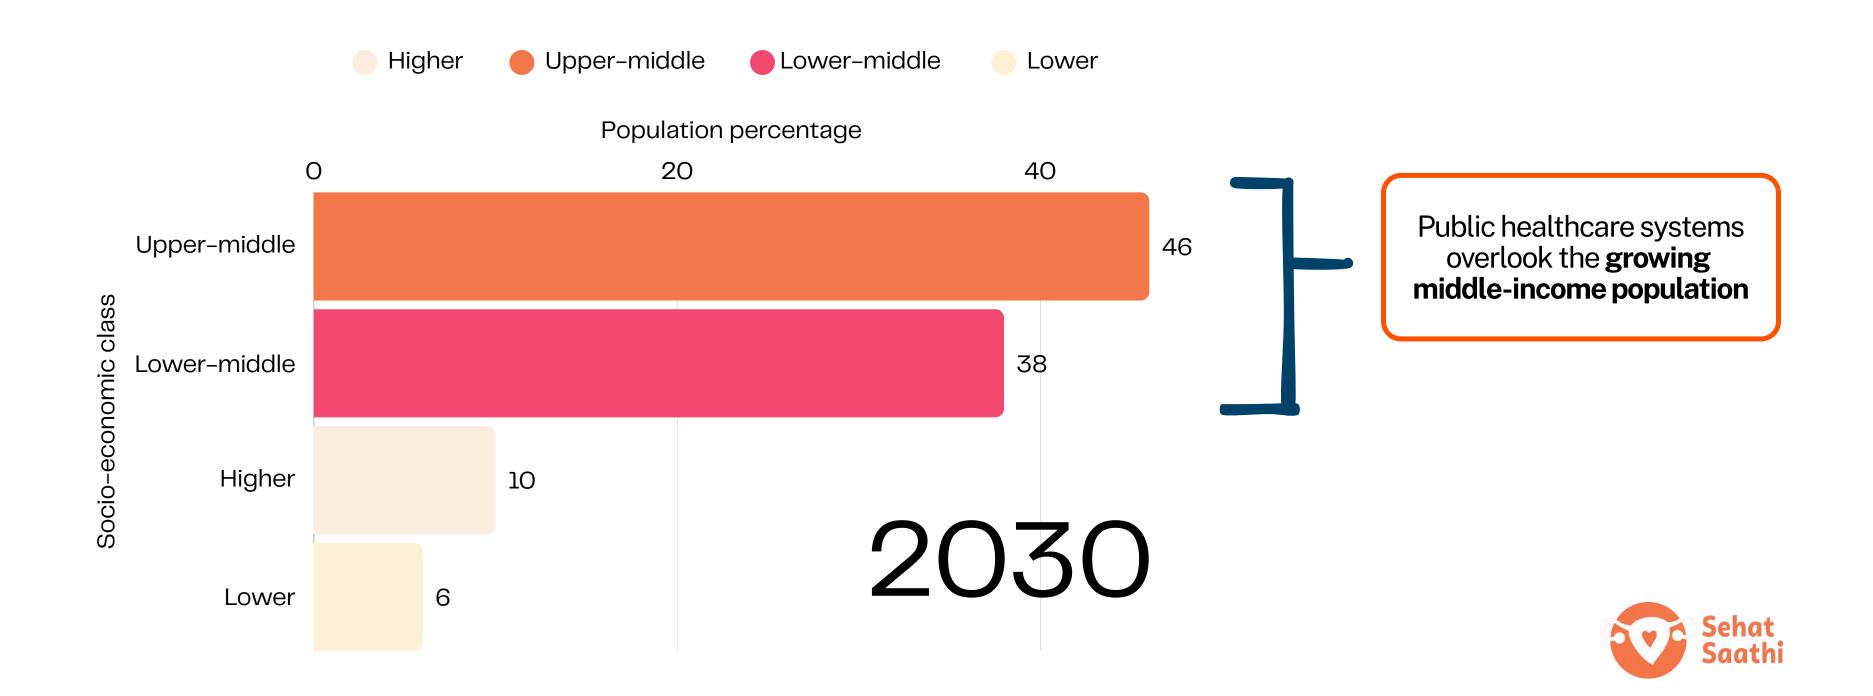

#### **Lack of Unified HIS**

There's no one reliable source of information like the NHS in the UK. Internet is overcrowded with information and misinformation and navigating credible sources is difficult.

#### The Missing Middle

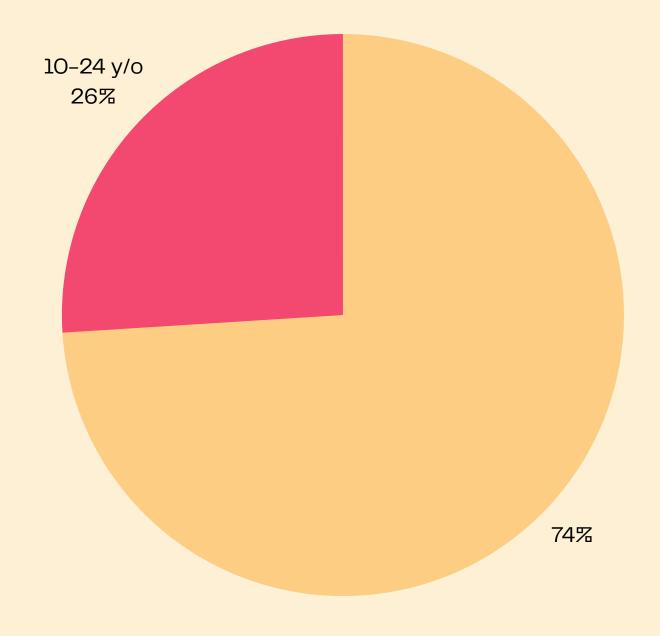

Most of these public health services are for people
Below the Poverty line (BPL), so a large population of
the middle income group relies on private sector &
health insurance leading to heavy OOPE to access
healthcare

### The Missing Middle

### Young Country

Largest young population in the world, estimated at around 382 million individuals aged 10-24 years old.

## Let's get to know them

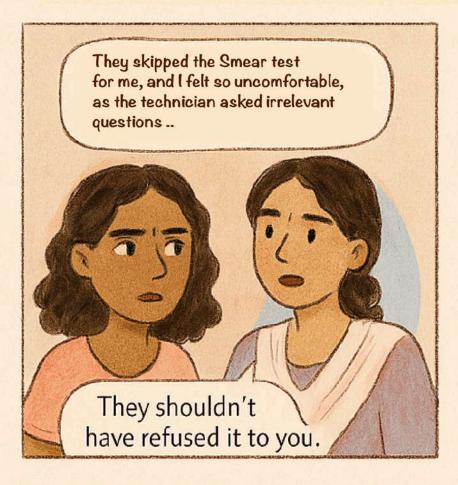

Understanding SRH experiences of adolescents from urban Indian communities belonging to Middle income families.

Kajal, 22

Young Woman seeking autonomy

Able to afford private healthcare services clinic but barriers preventing access

Fear of judgement, negative attitudes, stigma surrounding sexual health and lack of privacy

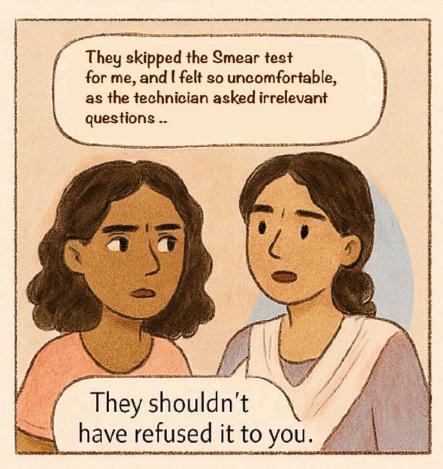

Facing health risks, and information through multiple sources makes her overwhelmed and anxious.

Wishes she was more aware about preventive measures so that she can make informed health decisions to avoid her anxiety and financial distress.

Kajal's ability to take preventive measures and making informed health decisions is compromised due to individual, sociocultural and structural barriers like fear of judgement, negative attitudes, misinformation but more importantly, due to a lack of autonomy.

How might we empower urban young adults (22) with a sense of autonomy so that they make informed health decisions to prevent health risks.

#### **Building autonomy should start early**

Instilling this sense of autonomy, health-seeking & decision making behavioural change must start at an early stage of Adolescence (10-14)

- Erik Erikson's Stages of Psychosocial Development & WHO

Jiya, 14
Teen
Navigating
Pubery

Curious, Confused

Navigating puberty through conversations with peers, lots of media exposure and misinformation but lack of guidance/ access to reliable health info to get answers on her personal and unique challenges.

Wishes she had more knowledge beyond the bookish knowledge and a safe space to ask questions on her specific health challenges.

Wishes she had more knowledge beyond the bookish knowledge and a safe space to ask questions on her specific health challenges.

Wishes credible parent-friendly resources to support her child in the crucial years navigate puberty.

## + Hypothesis

I believe that providing urban early adolescents (ages 10–14) and their parents with a personal, culturally-relevant, and credible SRH information will result in stronger autonomy and preventive health-seeking behaviours by age 22, because early exposure to trusted knowledge builds confidence, normalises open dialogue, and encourages informed health decisions. (including willingness to access preventive services)

## + Methodology \

4 parent interviews

Visual Culture Research

**Observations** 

2 Adolescent (~14) and 3 Parents co-design sheets Workshop (stitching) with community mixed age groups 2 expert Interviews 1

#### Strong foundations exist for open dialogue – but parents need support on specific sensitive topics

Some parents are already engaging in open conversations about puberty and hygiene from an early age.

#### Swasthya Karyakram (RKSK Non-Communicable Key Insights Diseases Smear dolescent Friendly Test Health Services HPV Vaccine HIV Puberty Menstruation Stigma/ Taboo around Sexual and Reproductive Health Body image Health & Hygiene

#### Gap

Conversations around sexual and reproductive health (SRH) at home remain under-explored due to discomfort or unawareness on and lack of culturally appropriate, trusted materials.

#### **Opportunity**

Develop culturally relevant conversation tools (eg. cards, co-learning tools) to support parents in initiating open dialogue on tough conversations without fear or shame.

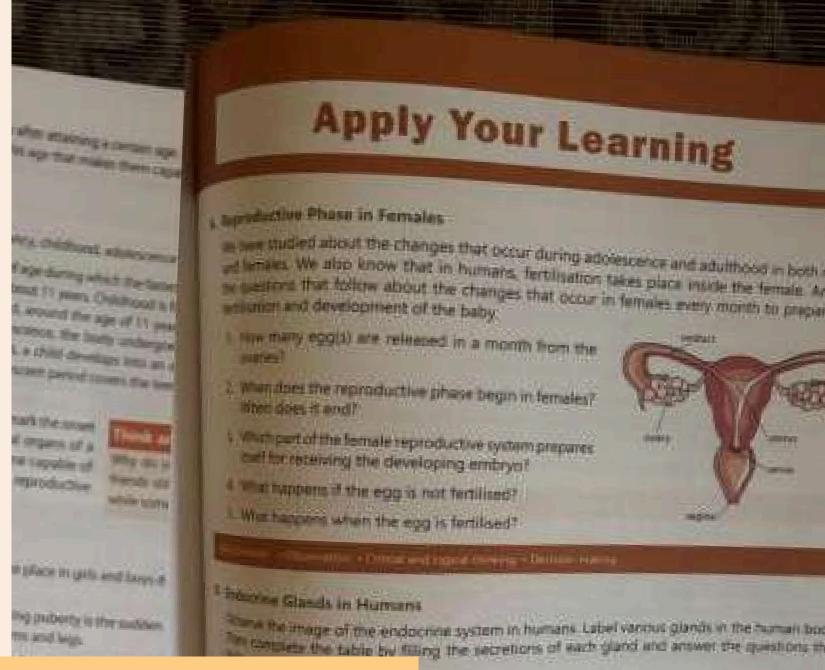

Topics I find difficult to talk about with my child to talk about with me wareness on awareness on

Topics/ servimore about, with my

#### 2

#### Culturally-tailored, tangible tools may lower barriers to sensitive topics

Printed books (encyclopedias, Menstrupedia) preferred over internet or school media as they can be visually engaging and culturally-tailored.

#### Gap

School textbooks are very clinical and Parents struggle to find quality, localized content especially relating to SRH

#### **Opportunity**

Using visual storytelling formats to give credible knowledge and normalise access to prevent care services and learn about topics like puberty, vaccination, and hygiene.

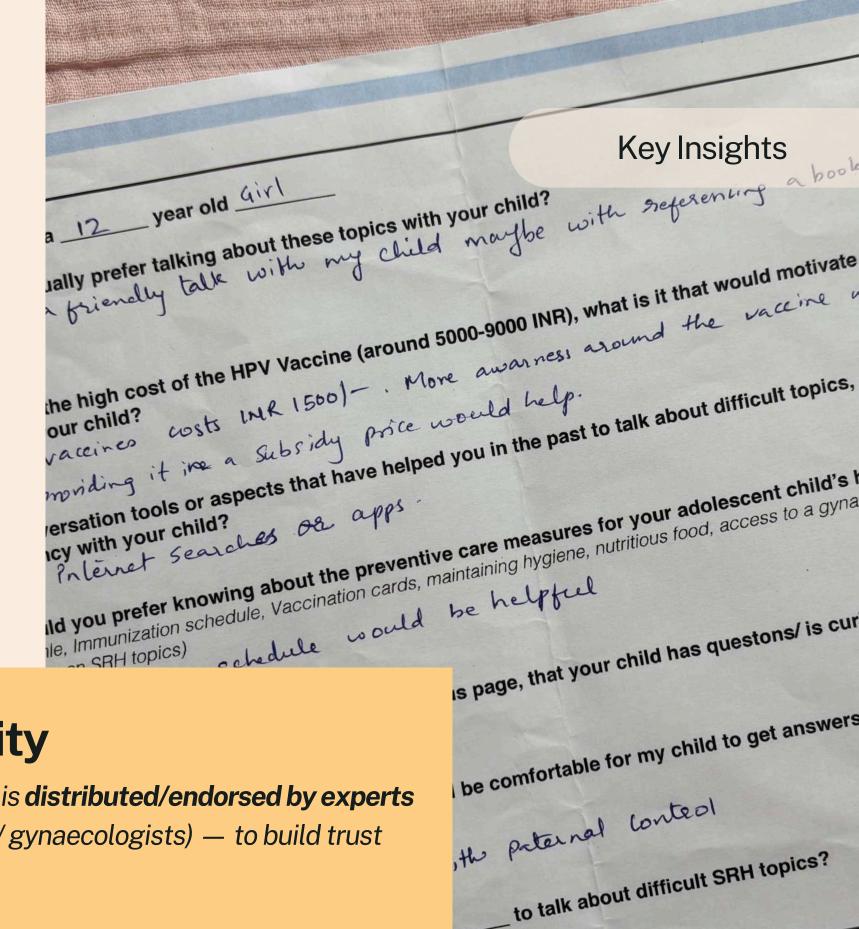

#### Parents trust Doctors, not the internet, tools must be medically verified

Parents prefer books and doctor-approved content (e.g., NHS, pediatricians) over online resources.

#### Gap

Parents worry about their child navigating or relying on internet or non-reliable sources for SRH.

#### **Opportunity**

Ensure the toolkit is **distributed/endorsed by experts** (e.g. paediatrician/gynaecologists) — to build trust and credibility.

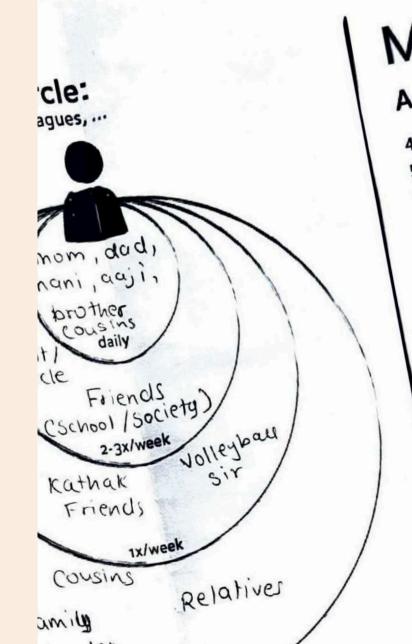

to talk about difficult SRH topics?

d be so much more

#### Rewards help sustain engagement

Adolescents respond to empathy, privacy, and small rewards like stickers, points, reaching milestones or games.

While Parents want to have a deeper understanding of how their child thinks or reacts to situations.

**Opportunity** 

Scenario cards seen as highly valuable to spark reflection and to understand children's thinking (for eg. Reflection tools like scenario cards 'What would you do if...' to facilitate meaningful interaction.)

#### **Opportunity**

Preventive health journey checklist that integrates SRH checklists, puberty milestones, vaccine reminders. Including an engagement aspect like sticker tracking, milestone badges to reinforce behaviour change and keep learning consistently

To achieve this goal I need...

Biscipline oritionce

For early ado

y goal in life is to...

#### 5

#### Structured referral pathways can normalise and build early SRH Access

Fragmented healthcare system leads to limited integration between pediatricians and gynecologists for adolescents.

#### Gap

Parents do not always know where adolescentfriendly services (e.g., Gynaecologists' clinics) and there are mutliple barriers to accessing them

#### **Opportunity**

Adolescents feel more at ease accessing gynaecological care when introduced gradually via trusted doctors, like their paediatrician.

## + How might we

HMW empower parents with trusted, culturally-sensitive tools to confidently support adolescents' SRH journeys at home?

HMW create an engaging SRH conversation tools that encourage reflection and trust between adolescents and parents?

HMW integrate SRH education into existing trust channels like paediatricians to normalize preventive conversations early?

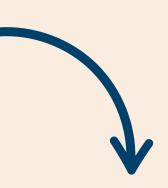

HMW use small rewards and storytelling to make SRH education feel engaging and stigma-free for adolescents?

Form of the Toolkit

HMW design SRH content in a personal, familiar, and tangible formats that feel less intimidating and more relatable for Indian families?

### Problem

Urban adolescents and parents face socio-cultural stigma, misinformation, structural and systemic gaps in accessing preventive sexual and reproductive healthcare in India. Preventive behaviours are under-developed due to lack of open dialogue, trusted resources, taboo around gynaecological care leading to compromised decision-making and autonomy in healthcare.

## + How might we

How might we empower urban Indian adolescents and parents with credible, culturally-tailored, and visually engaging physical toolkit that normalises open dialogue, builds trusted SRH knowledge and referral pathways to ease early access to preventive healthcare services?

#### What

A personal, credible and educational toolkit to support Sexual & Reproductive Health journeys

#### For

Urban Indian parents and their adolescents, who often rely on school-based education for reproductive health topics.

#### **Purpose**

The toolkit will provide culturally tailored tools to question stigma and social norms, deliver accurate SRH information, and encourage open, humanised dialogue within families.

#### Goal

- Increase adolescents' SRH knowledge
- Reduce shame and stigma
- Strengthen their confidence in accessing available SRH services

#### **Visual Zine Collection**

Supports curiosity and confidence through engaging, medically verified, culturally familiar visuals

How-to zines
Steb-by-step guide to SBE
Why HPV vaccine is important

#### **Scenario Cards**

(Parent-Child Co-learning)

Enables open dialogue through culturally-relevant storytelling Helps break stigma by prompting reflective and deep discussions

What if, what would you do if prompt cards... learn about adolescent rights

#### **Health Card Checklist**

(Incentivised)

Builds autonomy and ownership of preventive SRH care (vaccines, checkups)

**Preventive Measure Checklist** 

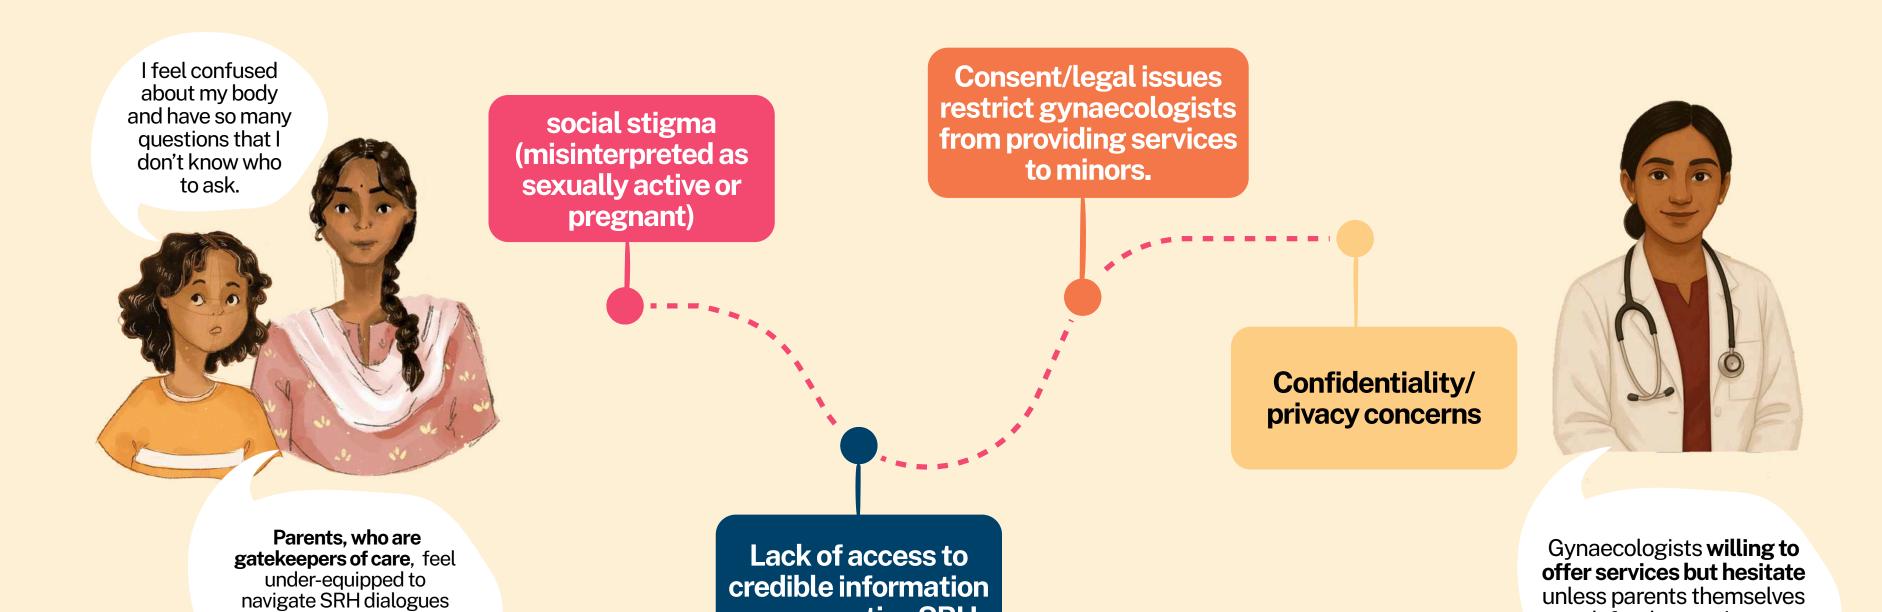

#### Badges & Rewards (Stickers, Milestones)

Culturally inspired (e.g., Harry Potter/Roblox), these build sustained engagement

Integrate SRH education through existing trusted channels

like paediatricians so that preventive SRH care conversations are normalised and accessed early?

Socio-Cultutal, Structural and Legal barriers to accessing gynacological care

ask for the vaccine or

come with their child for

consultation.

on preventive SRH

around certain topicssuch as Social Stigma,

Preventive measures for

STIs etc..

A referral pathway to gynaecologists starting from pediatric care Dual Consent from Parent and Adolescent for accessing services

Confidential
Disclosure
Agreement (CDA)

Gynaecologists feels safe and confident offering services

bypass sociocultural stigma and barriers to access gynaecological care more comfortably and confidently.

Doctor-curated resources build confidence and autonomy.

Co-creating enablers to bypass barriers and access gynaecological care with confidence

Design Implications from Expert Interview

Jiya, 14 & her Mother

Visit Paediatrician for a routine check-up and they see a shelf in the clinic saying "Potli of Care"

Paediatrician hands over "Potli of Care toolkit" to Jiya and her mother and briefs them about the components and how to use. Here you go! This is your Potli of Care for you and your child, it includes small comic zines (SBE), Loopin Scenario Cards for parents and adolescent, My Rights as an Adolescent, vaccination checklis

**Obstetrics & Gynecology Clinic** 

First appointment, with Gynaecologist making them comfortable.

Parents are a part of the conversation when they get the family history. And at some point during the visit, they speak privately with teens.

Referral to partner Gynaecologist

Sign Dual Consent with Parent anf Jiya to talk to teens privately and also a Confidential Disclosure Agreement (CDA) that mentions that their information will be kept safe and confidential **Obstetrics & Gynecology Clinic** 

At home

**Private Testing Lab** 

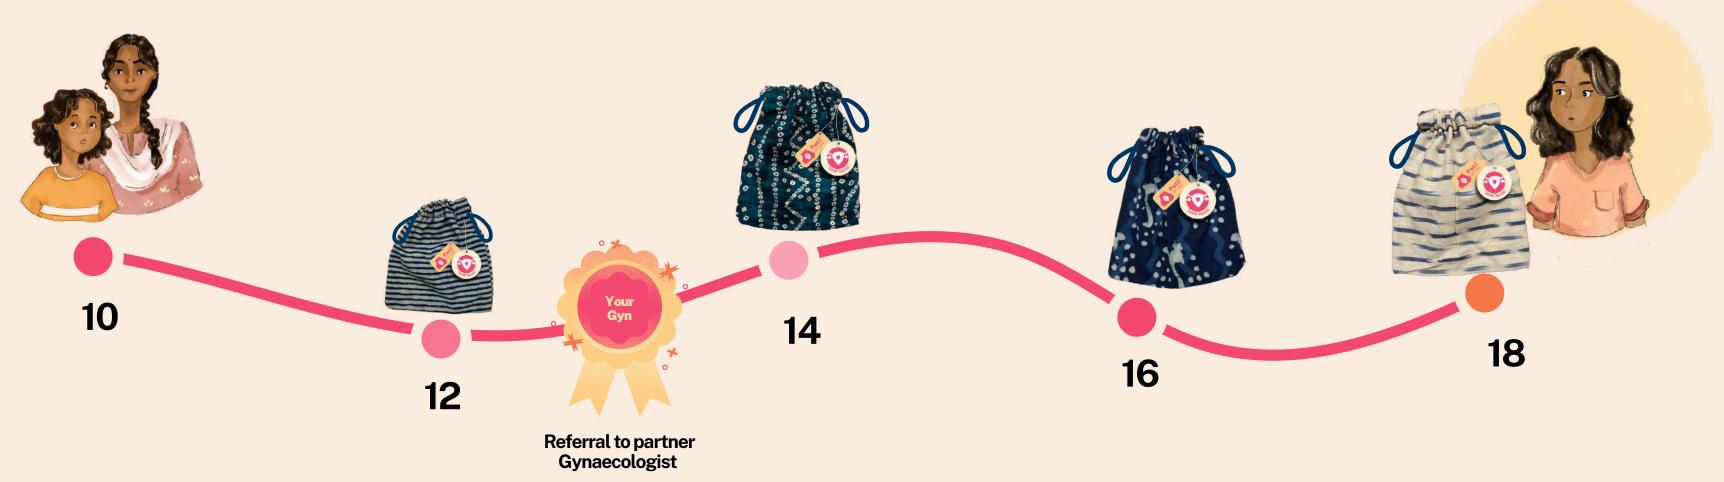

#### A life-stage intervention

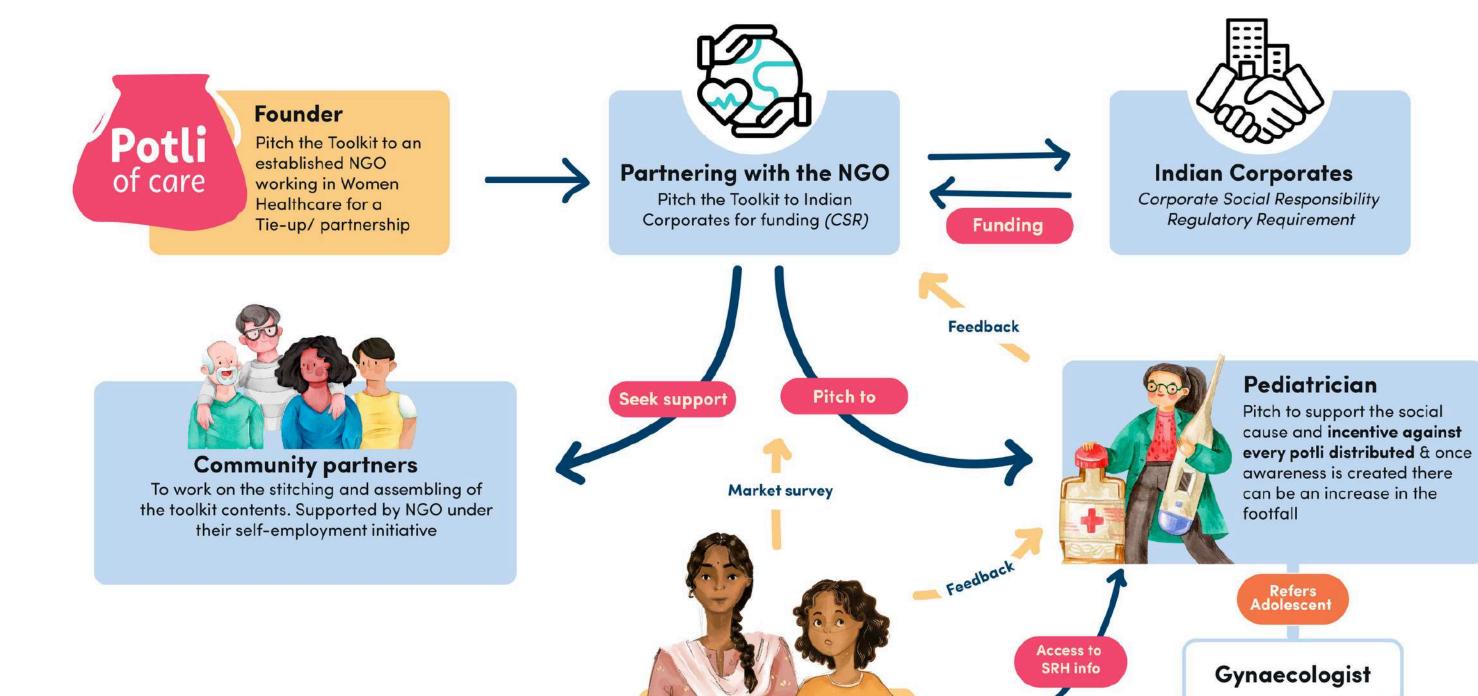

From

Compromised decision-making and lack of autonomy

**Vision** 

To

Building a generation of autonomous, healthinformed young adults who seek preventive SRH services with confidence

**Target Users** 

**Urnban Indian Parents** 

and Adolescents

Confident in accessing

**SRH** services
